

SC Connectors and Cable Assemblies >

As data centers and telecommunications networks are evolving, there is an increasing demand for high-density connectivity solutions to handle large volumes of data without occupying excessive space. The standard size and reliability of the SC Connectors and Cable Assemblies makes them suitable for high-density applications such as dense panel configurations and high-port-count applications. These connectors play a vital role in fiber optic networks and help ensure exceptional signal integrity in high-speed and high-bandwidth in applications.

ADVANTAGES AND FEATURES

Provides reliable performance and easy mating with industrial brand in market

These connectors can be mated with existing plug housing and terminals for easier operation and customer purchasing.

Helps Identify the different optical models in application

The variety of colors and boot styles provides practical benefits for managing, maintaining, and configuring fiber optic systems, improving both operational efficiency and system reliability.

Minimizes termination time and cost

The one-piece body design of these connectors and cable assemblies enhance both the efficiency and cost-effectiveness of fiber optic installations, providing significant savings and benefits to customers.

Offers excellent protection of eyes in field installation

The shuttered adapters are a crucial safety feature as they shield against exposure to laser radiation for unused fiber channels.

Helps improve the transfer signal and reduces the attenuation for whole equipment

The low insertion loss ensures efficient and reliable operation of fiber optic networks, supporting high-speed data transmission and maintaining the integrity of the signal throughout the system.

MARKETS AND APPLICATIONS

Telecommunications

Data centers
Hubs
Servers routers
Central office/remote hubs

Servers & Storage

Storage servers

MedTech

Medical imaging devices (MRI, CT)
