## Scott Whicker

Senior Vice President and  
President, Transportation  
Innovative Solutions

### BIOGRAPHY

Scott Whicker is the Senior Vice President and President of Molex's Transportation Innovative Solutions (TIS) Division and a member of the Molex Global Leadership Team.

Scott assumed the leadership role for TIS in 2023 following nearly five years as the Senior Vice President & President for Molex's Global Sales and Marketing capability. In that role, he was responsible for commercial customer experience sales growth and development, and the transformation of Molex's Marketing capability globally. Scott's experience driving innovation in the automotive industry at various stages in his career positions him well to lead one of Molex's most dynamic and growing business categories, a category which is also undergoing massive and rapid evolution—from electric to autonomous vehicles and all of the life-saving technology in between.

Scott joined Molex in 1993 as a Sales Engineer and soon accepted a position in the Detroit area as the company's first resident engineer with General Motors. Scott helped develop a prosperous relationship with that customer before transitioning into a new role in 2007 as VP, Global Automotive Sales and relocating to Shanghai. Gaining experience managing a global team, he returned to the United States in 2012 to oversee Sales in the Americas while continuing to manage the Global Automotive team. Based out of the Lisle office, Scott developed new experience in distribution, EMS, and regional team management.

A graduate of Purdue University with a BS in Electrical Engineering, Scott also received an MBA from Indiana University. Scott resides in Rochester Hills, Michigan.
